

Cold pressure welder SAB-M30

With the cold pressure welder SAB-M30 copper wire with a diameter of 0.8 – 1.8 mm can be welded together in only a few seconds. When changing your wire coil or you have a wire break you can easily joint the ends with the cold pressure welder. Forget about the time-consuming new thread of the copper wire.

Not only can you weld together round wire but also flat profiled copper wire. You only need to change the specific die (tool).

The cold pressure welder is delivered in a special case where you can store your individual dies.
