

Quick change head piece-holder

By loosening the clamping-plate with two socked-head screws, the carbide headpiece can be easily exchanged sideways.

This will save time and idling of the welder for removing the welding-roll and powder application tube and also resetting of the welding geometry.

Suitable for FBB 400, 500, 5501, 5502, 5600, F5700, 5800
